Abstract of **CH657258**

The connecting device (1) is used to fasten a wooden leg (B) to the sitting surface (S) of a chair or to the table top of a table. The connecting device (1) is made of metal and includes a support sheet (2) which is connected by means of ribs (22) to a bowl (3) which is adapted to the cross-sectional profile of the leg. The leg (B) is fixedly connected to the connecting device (1) by means of a second bowl (4) and screws (5). The support plate (2) can be connected to a sitting surface or table top by means of screws. If necessary, two or even four bowls (3) can be connected to one another by means of metal webs.
